Food

Publicly listed on Oslo Stock Exchange (OSEBX: TOM)

Food
making every piece of food count

Leading market
position

TOMRA is uniquely
positioned along
powerful global
megatrends

50 years of
know-how

Best-in-class
technology

Purpose-driven
employees

A hiker with a red backpack is crossing a rocky path over a turquoise lake. The hiker is wearing a blue shirt, yellow shorts, and a hat. The lake is calm, reflecting the hiker and the surrounding landscape. In the background, there are snow-capped mountains and a forested hillside. The sky is blue with some clouds.

Our vision is to Lead the Resource Revolution

It is our belief that businesses have the power and responsibility to help manage our planet's precious resources – today and tomorrow.

TOMRA's global presence

Installed base ~105,000

	Collection	Recycling	Food
EMEA	~63,000	~6,300	~5,600
Americas	~14,000	~1,400	~6,300
Asia Pacific	~5,000	~1,300	~1,900
Total	~82,000	~9,000	~13,800

Creating value through three divisions

platform...

... while keeping a
strong entrepreneurial
spirit

TOMRA's transformation journey

mergers and acquisitions

2004 TITECH

TOMRA acquires TITECH, the world's leading provider of optical recognition and sorting technology for the waste industries and TOMRA's transformation journey starts.

2006 Commodas

TOMRA acquires Commodas - a leading supplier within the field of sensor-based products for mining and metal recycling.

2011

Sale of Californian material handling business. With the divestment the US operation became less exposed to movements in commodity prices.

2012 BEST

TOMRA acquires BEST, leading food sorting machine producer. With the acquisition of BEST, TOMRA has by far the widest reach within the food sorting universe.

2016 Compac

TOMRA expands into lane sorting, acquiring New Zealand based Compac, confirming TOMRA's position as the leading provider of sorting technology into the food industry.

2005 Orwak

TOMRA acquires Orwak Group, a leading provider of compaction for a variety of materials.

2008 Ultrasort

TOMRA acquires Ultrasort - specialists in sensor-based mining technology.

2011 Odenberg

TOMRA acquires Odenberg, rounding out the offering to include food optimization.

2014

Divestment of Orwak. Further portfolio focus on sensor-base technology.

2018 BBC Technologies

TOMRA complements its food sorting portfolio with the acquisition of BBC Technologies, a leading provider of precision turnkey solutions for blueberries and other small fruits.

TOMRA Collection

TOMRA Recycling

TOMRA Food

Each year, at least 8 million
tons of plastics leak into
the ocean.

That's the equivalent of
one garbage truck
every minute.

The New Plastics Economy
World Economic Forum (2016)

Location: Vacha Dam, Bulgaria

But the tides are shifting. There's a desire for change...

Consumer demand
for responsible plastic
use options

Legislative push for
new plastic waste
strategies

Market pull from large
brand owners and
companies

Today: post-consumer plastic packaging is treated linear instead of circular

Source: Ellen MacArthur Foundation

Our experience
and technologically
advanced solutions
help create circular
value chains that
benefit business
and society.

TOMRA Collection

performing DRS²

An overview of current deposit markets

Upcoming deposit markets

Quebec:

Deposit system to be modernized 2023

Connecticut:

Expansion of existing deposit system in 2024

Ireland:

Deposit system to be implemented in 2024

Poland:

Deposit system to be implemented in 2025

Hungary:

Deposit system to be implemented 2024

Romania:

Deposit system to be implemented 2023

Austria:

Deposit system to be implemented 2025

Singapore:

Deposit system to be implemented 2025

Victoria:

Deposit system to start in November 2023

New Zealand

Deposit system proposed for 2025

Collection target for plastic bottles:

- 77% by 2025
- 90% by 2029

Recycled content in product design:

- 25% by 2025 in PET bottles
- 30% by 2030 in all plastic bottles

EU Single-Use Plastic Directive:

Targets on recycled content and collection target for plastic bottles. Deposit scheme mentioned as a mean to reach those targets.

High collection rates achieved in two years' time

*Deposit values converted to EUR for comparison purpose

A meaningful deposit value is the strongest driver of results

Return rates compared to purchasing power parity-adjusted deposit values - € (2018)

High-performing systems are achieving good results with a deposit of €0.10 (PPP-adjusted)

We are driving the market momentum through global advocacy work aiming to achieve best practice deposit systems and generate demand through innovations

EUROPE

AUS NORTH AMERICA

ASIA

LATIN AMERICA AFRICA

Collection targets for plastic beverage bottles

77% 2025 **90%** 2029

Targets for recycled content in plastic beverage bottles

25% 2025 **30%** 2030

Continued work with governments to implement best practice deposit legislation

Innovate solutions that trigger modernizations and increased demand

The four principles of high-performing deposit return systems

PERFORMANCE

A collection target for a broad scope of beverage packaging plus a meaningful deposit **delivers strong results.**

CONVENIENCE

The redemption system is **easy, accessible and fair** for everyone.

PRODUCER RESPONSIBILITY

Producers manage, finance and invest in the system with use of unredeemed deposits and commodity revenues.

SYSTEM INTEGRITY

Trust is built into the system's processes through transparent management, a data-driven clearinghouse, and reliable redemption technology.

Reinvestment of unredeemed deposits and material revenue within the system

In Norway
over 80% of the
system's costs are
covered by
unredeemed deposits
and material revenue

**Profit and loss overview of Norway's
Central System Administrator (2019)**

Legislative outlook supports new and expanded Deposit Return Scheme (DRS) markets towards 2030

* In addition, some markets have refillable deposit systems such as: Austria, Belgium, Chile, Czech Republic, France, Hungary, Poland and South Korea

Europe and the Single Use Plastic Directive (SUPD) will be the main driver of new deposit markets towards 2030

**All EU member states
to collect 90% of
plastic beverage
bottles by 2029**

* In addition, some markets have refillable deposit systems such as: Austria, Belgium, Czech Republic, France, Hungary and Poland

Strong local presence in existing and upcoming European deposit markets

Establishing local TOMRA entities and building local presence and partnerships early is key in our go to market strategy

* In addition, some markets have refillable deposit systems such as: Austria, Belgium, Czech Republic, France, Hungary and Poland

TREATMENT OF END-OF-LIFE PLASTICS IN EUROPE, 2020

TREATMENT OF EUROPEAN END-OF-LIFE PLASTICS, 2020
MILLION TONNES

Sorting is essential for a circular economy

Waste sorting segment

Recover materials for recycling from both source separated and mixed household waste

Segment share of installed base

Recycling segment

Upgrade material to pure fractions for high quality recycling

Segment share of installed base

Ore sorting segment

Recovery and ore sorting to reduce environmental impact

Segment share of installed base

How does sensor-based separation work?

Feeding of
unsorted material

High-tech sensors to **identify objects**

Automated sorting process using
different sensors for different sorting tasks

Precise ejection by ultra fast
air jets

Product specific equipment design often
including multiple technologies to maximize
sorting efficiency

High-speed processing of information
(material, shape, size, color, defect, damage
and location of objects)

A broad sensor-based technology portfolio

- ELECTROMAGNETIC SENSOR (EM)**
Electro-magnetic properties like conductivity and permeability
- LED SPECTOMETRY (LED)**
Color and spectral properties based on multiple LED light sources in very high optical resolution
- NEAR-INFRARED SPECTROSCOPY (NIR)**
Specific and unique spectral properties of reflected light in the near-infrared spectrum
- VISIBLE LIGHT SPECTROMETRY (VIS)**
Specific and unique spectral properties of reflected light in the visible spectrum
- X-RAY TRANSMISSION (XRT)**
Atomic density irrespective of surface properties and thickness
- LASER INDUCED BREAKDOWN SPECTROSCOPY (LIBS)**
Elemental composition
- X-RAY FLUORESCENCE (XRF)**
Elemental composition
- INFRARED TRANSMISSION (IRT)**
Density and shape properties by light absorption
- IR CAMERA (IR)**
Heat conductivity and heat dissipation
- COLOR CAMERA (COLOR)**
Color properties measured in very high optical resolution
- LASER REFLECTION/FLUORESCENCE (LASER)**
Structural, elemental and biological properties by reflection, absorption and fluorescence of laser light

Automation with TOMRA units

Sorting of Municipal Solid Waste, Cyprus

Our solutions enable recovery of recyclables from different waste streams

AVL Leipzig, Germany

A modern packaging sorting plant can contain up to 60 NIR sorters

Mixed Waste Sorting Plant IVAR, Norway

Our solutions can also recover valuables from residual waste streams

The essential nature of mining means that the industry needs to make a leap towards a more sustainable future

- 15% to 50% of the ROM can be rejected in an early stage of the process (application dependent)
- low grade waste rocks don't need to be transported, crushed, grinded, or further treated

Our ore sorting solutions enable the mining industry to reduce their footprint

Ore sorting is used to:

- Reduce operational footprint by splitting the “good” and the “bad” materials early in the process
- Extend the lifetime of a mine
- Reclaim valuables for stockpiles

EFFECT OF SENSOR-BASED SORTING (SBS)	VALUE-ADD:		SAVINGS
	ENVIRONMENT	COST & PRODUCTIVITY	
Decreased energy consumption (Transport, pumping & dewatering, disposals)	✓	✓	• 15 kWh saved per ton of material • 2% to 3% of the world energy consumption is used for crushing, screening and milling
Decreased water consumption (Cooling, transport in the process)	✓	✓	• 3 to 4 m³ water saved per ton of material
Reduced carbon footprint	✓	✓	• CO₂/Green counter, 7.5 kg per ton of material sorted • TOMRA Sorters saved ~124,000 metric tons of CO₂ in 2018
Decreased Transport cost		✓	• Costs down €0.30/ton/km
Chemical usage decrease (Flotation reagents, acid for leaching and cyanide)	✓	✓	• A few grams up to a few kilos per ton
Reduced tailings (fine particles)	✓	✓	• 3 m³ tailings volume per ton (2 m³ material plus 1 m³ water)
Productivity increase (De-bottleneck conventional process)		✓	• Per ton of waste 1 additional ton of ore production
Lifetime of Mine increased	✓	✓	• 30-50% longer life of a mine
Waste into value (Create sellable product)	✓	✓	• The coarse waste rejected can be sold (for a low price)
Legislation		✓	• Up to 3 years quicker approvals
Reduced cut-off grade (Higher dilution in the mine, process marginal dumps)		✓	• 30-50% more reserves

Our technology and innovations continue to push the boundaries of the recycling sorting market

New segments for automated sorting

Increase of automation and performance

Capacity growth

Recycling sensor-based
sorting equipment market

Out of scope for TOMRA addressable market: other non-sensor-based sorting equipment (magnets, ballistics, eddy currents), other waste processing equipment

Our solutions close the loop by enabling high quality recycling

Plastics

We are actively pushing the boundaries of plastics recycling by:

- Demonstrating advanced mechanical recycling
- Supporting chemical recyclers

Wood sorting

Textile sorting

Alloy sorting

We are investing into the development of solutions for new segments

We have two strategic priority areas

Accelerate growth

Increase the recovery
of recyclables

Enable high quality closed
loop recycling

Provide leading solutions and innovations

Utilize cutting edge
sensor technology

Exploit the power
of deep learning

Deep market expertise
and partnership

Develop digital
solutions & services

We are here to
enable closed loop
recycling solutions -
material stream by
material stream

Our commitment towards plastic packaging by 2030

30%

of post-consumer plastic packaging is recycled in a closed-loop

TOMRA Food

TOMRA Food

Transforming global food production to maximize food safety and minimize food loss by making sure **Every Resource Counts™**.

Currently, **33%**
of all food produced is
either lost or wasted

By 2050, a global
population of **9.8 billion**
will need **70%**
more food than is
consumed today

We have ambitions to
enable a post-harvest
food loss reduction of
50% by 2030

Robust drivers supporting the market

Population growth and rise of the middle class

Continued loss and waste of food

Shift to automation and digital tools

Cyclical investments in different categories, regions and seasons

TOMRA Food with a strong value proposition

Why Automate

Food safety

Quality improvement

Yield increase

Reduce labor

Cost savings

Minimize food loss and waste

Why TOMRA

Know-how

Expertise to transform the food industry

Technology

Best-in-class sorting and grading solutions, and digital insight

Partnerships

With local understanding, global know-how and long-term relationships

We are addressing approximately 60% of the total food sorting and grading market

Market position and addressable market

**includes protein, pet food, confectionary, etc.*

Our Technology...

Camera

Laser

Digital

Pulsed LED

Spectroscopy

X-ray

...are detecting
a wide range
of parameters

Foreign Material

Removal of foreign material in a material stream, e.g. insects, glass, metal, wood & plastics

Blemishes

Objects with spots or other (small) blemishes are removed

Toxins

Removal of produce contaminated with aflatoxin

Structure

Removal of soft, molded or rotten food

Biometric Characteristics

Sort based on chemical composition such as water, protein content, sugar content (Brix) and dry matter

Shape & Size

Sort on length, width, diameter, area, broken-piece recognition

Color

Grading by color or removal of discolorations in mono- and mixed-color material

Defects

Removal of visible and invisible small and substantial defects

Damage

Broken, split and damaged objects are detected and removed

Fluo

Based on the chlorophyll level present in produce defects are removed

Density

Detection of density differences

- Visible
- Invisible
- Both

Working principles in Food sorting

Air inspection

- 1 Infeed belt (unsorted)
- 2 Full width NIR and Color Vision sensors
- 3 Intelligent finger ejectors
- 4 Accept/reject

Belt inspection

- 1 Infeed Belt (unsorted)
- 2 Cameras
- 3 Lasers
- 4 Precise air guns
- 5 Accept / reject

Chute or Channel sorter

- 1 Infeed (unsorted)
- 2 BSI+
- 3 Laser
- 4 Precise air guns
- 5 Accept / reject

X-ray sorter

- 1 Infeed (unsorted)
- 2 X-ray source
- 3 X-ray detector
- 4 Precise air guns
- 5 Accept / reject

Singulated grading

- 1 Accumulation conveyor
- 2 Singulation conveyor
- 3 Acceleration conveyor
- 4 Roller rotation units
- 5 Cameras and NIR sensors
- 6 Gentle tipping or air jets
- 7 Specified grade

Systems for
reusable packaging

Legislative push to advance circularity

Recycled content

EU's Packaging & Packaging Waste Regulation (proposed)

% of post-consumer recycled content in packaging

	2030	2040
Single use plastic beverage bottles	30%	65%
Contact-sensitive packaging	30%*	50%
Other types of packaging	35%	65%

* 10% if PET is not major component

Reuse and refill

EU's Packaging & Packaging Waste Regulation (proposed)

% of reusable Take-away packaging

	2030	2040
Cold & hot beverages	20%	80%
Ready prepared food	10%	40%

National legislation on take-away packaging

France 1 January 2023:
Mandatory reusable tableware for dine-in

Germany 1 January 2023:
Mandatory reusable take-away alternatives

Sweden 1 January 2024:
Mandatory reusable take-away alternatives

Denmark 1 January 2025:
Introduction of EPR packaging fees

Portugal 1 July 2022:
Tax on single use take-away packaging

The gap in plastics recycling

Majority of plastics are lost today

- In Europe alone, 24 million tons of plastics are lost to incineration and 14 million tons to landfill
- The volume of each waste plant and incinerator is too low for sophisticated sorting to ensure the quality and fractions required for recycling

GAP

Demand for recycled plastics

- Already a strong demand for recycled plastics will increase significantly in the next few years (more than 10 million tons from major plastic producers)
- Mechanical and chemical recyclers need an individual polymer fraction at sizeable volumes to justify investments

Input

Mixed plastics fraction
sourced from material
recovery facilities

Advanced sorting
Dry washing

Output

High quality polymer
fractions to be supplied to
recyclers (PE, PE-LD, PP,
PS, PET, film)

TOMRA Feedstock Plants

Germany

- Announced 19 December 2022
- 100% TOMRA owned
- EUR ~ 50-60 million investment
- Capacity ~ 80.000 tons p.a.
- Input: mixed post-consumer plastic
- Output: >10 different polymer fractions for mechanical and chemical recycling
- Operational in 2024-2025 est.

Norway

- Announced 31 May 2023
- Joint Venture 65% TOMRA / 35% Plastretur
- EUR ~ 32 million investment
- Capacity ~ 90.000 tons p.a.
- Input: mixed post-consumer plastic
- Output: 8 different polymer fractions for mechanical and chemical recycling
- Operational in the first quarter 2025 est.

Circular re-use system for takeaway packaging

Collaboration with Aarhus Municipality in Denmark on a deposit system for takeaway packaging

Aarhus indfører pant på takeaway-emballage

Vi bruger ca. 300 millioner engangskopper og 150 millioner engangsbokse til takeaway om året i Danmark. Som den første kommune i landet er Aarhus klar til at indføre pant på takeaway-emballage. Målet er at skabe et cirkulært system, hvor emballagen bliver indsamlet, vasket og genbrugt.

Use of proceeds

ICMA category: Pollution prevention and control

Expenditures related to:	Examples of eligible assets:
Collection, sorting and processing of beverage containers	• Manufacturing, installation, maintenance, and operation of reverse vending machines (RVMs) • Sorting and processing facilities • R&D related to the development and design of RVMs • Collection systems for reusable packaging • Outreach to raise awareness and support for deposit return schemes
Recovery and upgrading of valuable materials from waste streams for recycling	• Software development for waste sorting machines • Assembly lines for manufacturing of sorting machines • R&D to improve performance or enable sorting of new types of materials (e.g., textiles) • Investments in the sorting and processing of post-consumer materials
Minimizing the carbon footprint of operations	• Renewable energy equipment • Clean transportation • R&D to increase the use of sustainable materials

Highlights from Cicero Second Party Opinion

“TOMRA’s RVMs and waste sorting machines are **well-aligned with circular economy solutions and a low-carbon future**”

By improving material recovery for recycling and reuse, TOMRA’s RVMs and waste sorting machines are an **important contribution to the climate transition, a more circular economy, and improved waste management**”

“RVM solutions have the potential to **limit climate emissions, local pollution, and harmful biodiversity impacts**”

“TOMRA has **significantly strengthened** its sustainability strategies”

“The overall assessment of TOMRA’s **governance structure** and processes gives it a rating of **Good**.”

°CICERO
Shades of
Green

Dark Green is allocated to projects and solutions that correspond to the long-term vision of a low-carbon and climate resilient future.

Our sustainability commitment

Leading the Resource
Revolution while
becoming a fully circular
business and being safe,
fair and inclusive

Our 2030 Sustainability Targets

Double the avoided emissions enabled by TOMRA products in use

Commitment to Net Zero emissions and setting Science Based Targets (to be externally verified by 2024)

100% renewable electricity

>80% reduction in operational transport emissions

>90% sustainable materials and components in all new products

>50% of our products are circular at their end of life

Strive for zero work-related injuries and illness in providing a safe place for people and the environment

Attract diverse talents from all facets of humanity, with a goal of 50% women and men joining annually

Grow female representation in senior management to >30%

Improve employee satisfaction and engagement with top quartile NPS Score

Supply Chain Sustainability targets will be announced in 2023

For a sustainable planet for
generations to come

we have an obligation to grow
