

TOMRA

Fill by Weight

CURO 2, 8, 12, 16

# Engineered for Blueberries, Cherries & Tomatoes

Punnet and clamshell filling solution

Gentle handling | Precise Weights | Easy to clean

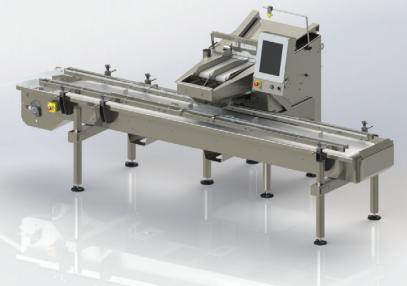

The CURO range is TOMRA Foods' innovative and industry leading filling solution, capable of consistently filling punnets, clamshells or boxes at target weights. We have specific designs for blueberries, cherries and tomatoes.

There are four different sized machines across the CURO range, with 2, 8, 12, and 16-head configurations to suit your requirements.

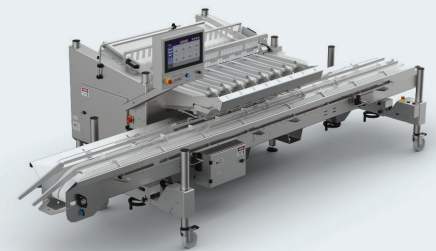

The CURO is versatile, with the ability to easily switch between packaging types such as clamshells, punnets and cups. Gentle on produce, the CURO has a small drop from conveyor belt to hopper, ensuring your product isn't damaged during sorting and packing.

The CURO system has a variety of functional options, including moving fill, twin fill, automatic sensor line stop and connectivity to downstream options such as heat sealers and packing tables. The CURO filling system is capable of consistently packing at speeds of up to 200 clamshells per minute.

CURO 16

## Fast Filling

With a number of design features, including precision filling control, short stroke clamshell denesting, and stop assist for rapid clamshell belt deceleration, the CURO range is able to pack consistently at up to 200 clamshells per minute.

## Gentle

The CURO design has minimal contact points, small elevation transitions between hopper and conveyor and anti-bruise surfaces to ensure preservation of fruit skin.

## Versatile

The CURO 2 fills a range of clamshells from 125gm (4.4 oz) to 5kg (11 lb). The remaining CURO's can fill from 125gm (4.4oz) to 1.25kg (44 oz). Change over of clamshell types is simple and efficient – easily adjustable flights and guides and quick change components mean no tools are required and the machine is ready to run again in less than five minutes. You can also use multiple CUROs in one turnkey line.

## Easy to Operate

The user interface has been designed with intuitive controls and simplified operation. Using a wide touch screen monitor the user can easily change items such as clamshell type and target weight with the touch of a button.

## Accurate

Precision controls across filling, denesting, and clamshell delivery enable the filling system to weigh with incredible accuracy. Trickle belts allow single fruit adjustments.

## Dual Ram Denester

Made for clamshells and can accommodate a wide variety of designs with intuitive adjustment.

- Integrates with our CURO filling system
- Simple changeover between pack types
- Available for all models of CURO
- Color coded quick release adjustment points for easy change in pack size

## Cassette Denester

Uses custom-designed cartridges specific to each punnet design ensuring reliable delivery of every punnet to the CURO system.

- Cassettes designed based on your needs for each specific punnet to ensure reliable performance
- Quick change between cassettes
- Autofeed option available to keep punnet magazine full
- Available for all models of CURO
